Reviewing data (C,U)
Check
- EBSD.zip contains .ctf files - from readme, can be opened with "standard commercial software" - need more info. I can't open them. Wait, turns out they are text files! Note that in readme?
- SEM_images.zip contains .png files, can open and view;
- TXM.tif - can open and view (can see stack in ImageJ, but can also see individual layers in Preview)
- Readme contains file inventory, with number of files zipped in each folder
